Experience

Software Engineer   Jan. 2020 - *current*
Nisum Technologies, Fremont, CA
- Collaborate with a team of seven, using Git and Gitlab throughout the development workflow.
- Attend daily standup meetings to discuss progress and roadblocks of current projects.
- Utilize HTML5, CSS3, Sass, jQuery, and Handlebars.js to build static pages of a production website, keeping modularity and reusability as key design principles throughout the development process.
- Develop **reusable, accessible, browser-friendly, and mobile responsive components** such as tabs, pagination, accordions, masonry grids, and content blocks.
- Dynamically render static data by serving JSON formatted data using Express routing, and using Handlebars' semantic templating to render data in static pages.
- Create unit tests of Vue components using Jest matchers and Vue-Test-Utils to mount components and provide wrappers, testing for user interface and functionality of individual components.
- Refactored code base to use reusable templates and Sass variables for font sizes and colors.
- Improved site accessibility with a Lighthouse score of 98% by adding ARIA tags to various HTML elements and components such as image tags, tabs, and accordions.

Technical Admissions Specialist   Nov. 2019 - Jan. 2020
App Academy, San Francisco, CA
- Conducted technical and non-technical interviews of coding bootcamp applicants.
- Critically assessed algorithmic aptitude in JavaScript and Ruby.

Outreach and Recruitment Manager   Sep. 2018 - Jun 2019
Breakthrough SF, San Francisco, CA
- Sole developer and designer in revamping company website for friendlier usability, launching new brand identity and incorporating new colors and logo. (www.breakthroughsf.org)
